If the generator goes on running with high temperature, the sensitive parts of the engine, control panel, and voltage meters can break down. Solution: keep the water in the radiator filled. Make it a habit to check the water level in the radiator after a month. You can also use a coolant along the water to get better results.

(Fixed) "Generator Runs for a Few Seconds then Stops" - 14 ...
The first thing I would do is re-adjust the valves, with backfiring and the damage seen I think the valve adjustment is too tight. Next will be a confirmation of the fuel pressure entering the generator, you will need some accurate test equipment.
