When you find difficulty in balancing the equation in the balancing chemical equations worksheet, you can miss it with a fraction of $\frac{1}{2}$ and that will easily balance the equation. But the problem is that you cannot have a fraction for the co-efficient, this is why doubling all coefficients will help you balance the equation.

What is the function of the parentheses in chemical equations. Take our photosynthesis example earlier. The product $C_6H_{12}O_6$ is a sugar called glucose. When the chemical equation was balanced, this compound appeared as $6(C_6H_{12}O_6)$. This means that there are six of the glucose compound.

Balancing Equations. The chemical equation described in section 4.1 is balanced, meaning that equal numbers of atoms for each element involved in the reaction are represented on the reactant and product sides. This is a requirement the equation must satisfy to be consistent with the law of conservation of matter. It may be confirmed by simply ...
