As a management tool, Markov analysis has been successfully applied to a wide variety of decision situations.

Perhaps its widest use is in examining and predicting the behaviour of customers in terms of their brand loyalty and their switching from one brand to another.

~~Meaning, Example and
Applications ...~~

In mathematics, a Markov decision process is a discrete-time stochastic control process. It provides a mathematical framework for modeling decision making in situations where outcomes are partly random and partly under the control of a decision
